

WHITEPAPER

BLACK SHARK
FINANCE

ABOUT COMPANY

PROJECT PROPOSAL

PROJECT PROPOSAL

It is a project based in the DEFI 2.0, with the utilities and functionality of a decentralized investment fund using the Blockchain Binance Smart Chain Technology.

The benefits and profits of Black Shark Finance are multiple, you as investor could make holding, blocked stake with different percentages of profit, all of this according of the block level, collect one of the diversities of NFT annual collection, and a lot of things that will be described in this whitepaper.

WHAT IS A VENTURE INVESTMENT FUND?

A venture investment fund is a field of private equity business, in which investors focus on emerging projects with long-term growth potential. In return, investors will receive an equity stake in these early-stage projects. Now, being part of Black Shark Finance (BSF) gives a seat at the early shareholder table.

AN INNOVATIVE PROJECT

WHAT IS THE DIFFERENCE OF BLACK SHARK FINANCE REGARDING OTHER DEFI PROJECTS?

Other DEFI projects are created and after a short time they fail, this is because of the decrease in the entry of new capital and it tends to exceed more capital outgoing than incoming, this causes the fall of the project and its value. With Black Shark we want to push the boundaries and not only create a DEFI with the standard benefits (Pool and Farm) that this provides to the investor, but to make the treasury capital work for the investor by generating extra income from external assets of the DEFI.

Black Shark will leverage the team's expertise in finance, marketing, audiovisual content creation, knowledge in traditional stock market (Forex, Futures, Stocks, etc.) and crypto assets such as Defi, also researching emerging projects in the crypto world, as well as in the new technology called Metaverse.

The investment community will have several passive return multipliers for their investment in Black Shark Finance, which is measured in three levels of risk (low, medium and high) and in time, divided in quarterly form.

By investing in BSF, the project is leveraging a new fund targeting for emerging crypto projects and stock assets in which Black Shark Finance will invest. In addition, the rewards program will bring massive new users to this financial initiative, reducing customer acquisition costs.

BINANCE SMART CHAIN

Binance Smart Chain has a technology similar to Ethereum but with a higher speed and lower cost per transaction. Since its launch in September 2020, its ecosystem has continued to grow at vertiginous speed.

BSC is a fully independent blockchain and could continue to operate even in the event that Binance Chain is disconnected.

It is fully compatible with the Ethereum Virtual Machine (EVM), allowing it to run Ethereum-based applications. This property makes it easier for developers to migrate their projects from Ethereum to BSC.

In February 2021, The BSC community made the network even more attractive to new users as a cost-effective and stable alternative by reducing its gas fee from 15 Gwei to 10 Gwei to counter the strong increase in Binance Coin (BNB) price to over \$300 in February 2021. These initiatives continue in 2022 and beyond.

DeFi platforms developed at BSC have begun to rival Ethereum protocols in metrics such as number of users, trading volume and total value locked in Pancakeswap, BSC's leading decentralized exchange (DEX), has surpassed Uniswap, Ethereum's most popular DEX, in those three metrics.

In summary, Binance Smart Chain (BSC) is a hard fork of the Go Ethereum (Geth) protocol and, as such, shares many similarities with the Ethereum blockchain. However, the developers of BSC have made significant changes in some key areas. The biggest change is BSC's consensus mechanism, which allows for cheaper and faster transactions. Low transaction costs, massive adoption by the world's crypto users, its programming compatibility and bright future have made the project opt to work on Binance Smart Chain.

BINANCE
SMART CHAIN

VALUE ACCUMULATION STRATEGIES

Venture Capital Investment

Black Shark Finance is a digital investment fund of tokenized assets, built on the Binance Smart Chain network, which aims to provide investors with maximum returns by utilizing its portfolio of assets through various ICOs and emerging cryptocurrency projects. BSF will leverage its treasury to invest in projects with short, medium and long-term potential. Projects include primary equity-backed funds, seed investment financing and profit distribution of publicly traded cryptocurrencies.

Linkage

The protocol will allow BSF to enhance the sale of tokens by purchasing its own liquidity and other reserve assets, such as BTC or stable coins to acquire further economic backing over the project. BSF tokens will be used as collateral to back the bonds.

The more BSF tokens put into circulation within the project to develop the protocol, the more powerful it will become. The protocol has a built-in inflation factor, which is designed to allow both liquidity providers and token holders to share in the success of the protocol.

MEET THE DEVELOPMENT TEAM

Black Shark Finance is a team of serious and experienced professionals and programmers. To guarantee the reliability of the project, the team and advisors will be publicly doxed to a company in charge of KYC. You will find more information from the core team listed below.

CREATING A NEW LEGACY

In 2021, we contemplated the birth of protocol-owned liquidity (PoL) frameworks called DeFi. The most significant example is Olympus, and its iterative forks offered exorbitant APYs.

These decentralized financial systems initially worked well: they fueled a gigantic community. Some were able to raise billions of dollars in Treasury bonds in a matter of months. Many even surpassed six figures in total portfolios wagered. Their meteoric rise was celebrated. And yet, the system they created was destined to fail, as are all high-yield APY farms.

And why is this happening?

Excessive token issuance, as in Olympus, Wonderland or any other project that has an excessive or sub-realistic APY projection, is a very risky scheme and one where a few can win. The project ends when the entry of new capital decreases drastically. This will cause the early investors to take profits, the selling pressure is higher than the buying pressure and that's when the game ends. So begins the death spiral to \$0 value.

That is why from Black Shark Finance we bet on allocating a percentage of the treasury to have backstop investments such as BTC, indexed stocks or stable cryptocurrencies to guarantee their stability and investors' profits.

BSF BACKSTOP TREASURY

The minimum price is as close to a guaranteed price you can get in cryptocurrency to maximize investor returns. If the value of the BSF token falls below the established minimum floor, an automated buyback system is initiated to "defend" that price and guarantee a safe floor.

To defend the "floor", a public crypto asset that acts as a backing price floor for the market, an amount in our treasury will be allocated to achieve this. It will be called, BSF Backstop Treasury. The BSF Backstop Treasury acts like a savings account. Its function is to defend the BSF price floor through an algorithmic trading bot.

To ensure that BSF is never outbid by other bots, the exact mechanics of when buy orders are executed will not be made public. This means that there may be short periods of time when BSF briefly trades below the minimum price. Rest assured that the protocol will always buy BSF below the minimum price.

TOKENOMICS

FEES

Buy 7% First Quarter - 5% Second Quarter
Sell 20% First Quarter - 15% Second Quarter

Note:

- DEV wallets will be locked for one year counting from the launch of the token, after that year 25% of each DEV wallet will be unlocked annually.
- The change of Fees percentages will be voted when the first quarter of the project's life is completed.
- Proportions of the project's wallets will be announced shortly.

WHY BLACK SHARK FINANCE?

Investing in BSF provides multiple benefits for investors who make a stake in the DEFI 2.0, these benefits will increase as the project grows both in holders and invested capital. In the following section we will see why to choose Black Shark Finance in contrast to other DEFI.

Levels and Benefits.

Level 1: Make stake and lock in for 3 months.

Profit of 5% of the profit of external investments in (forex and futures trading) monthly distributed among all investors of level 1.

Accumulated profitability in percentage of APY by pooling or farm.

Level 2: Make stake and lock for 6 months in stake.

- Profit of 10% of profit from outside investments in (trading in forex, futures and crypto assets) monthly spread among all level 2 investors.
- Bonus of one exclusive NFT from the annual collection.
- Cumulative return in percentage of APY making pool or farm.

Level 3: Make stake and lock for 12 months in stake.

- Benefit of 25% of profit from outside investments in (low, medium and high-risk trading, futures, stocks, crypto assets and Yieldfarming) monthly spread among all level 3 investors.
- Bonus of an exclusive NFT from the annual collection.
- Exclusive AMAs on the official discord channel.
- Cumulative profitability in percentage of APY doing pool or farm.

BONDS EVENTS

Each quarter BSF bonds will be enabled where the token can be purchased at a reduced price below the current market value, these bonds can be purchased with BNB, BUSD and USDT. (It is not ruled out that in the future new payment currencies will be enabled for the BSF bonds).

The bonds will be blocked and will be released in different percentages, the first month 50% will be released and every month 10% until reaching the total amount.

The sale of BSF bonds will be announced on the website www.blacksharkfinance.com and in the official discord.

VOTING SYSTEM

All relevant proposals will be put to a vote, so that the investors with voting rights can have the power to make decisions and vote for the option they consider most convenient for the project, this will make investors feel that they are really part of the project and that their votes have the power to steer the course of the project.

Each investor will have the right to vote.

1 vote = 1 investor. This will ensure a balance of power among investors regardless of how much capital they have invested in the project or the number of tokens they have in their wallet.

To vote a BNB fee of \$1 USD will be charged, this BNB will go to the liquidity of the project directly or to the project that is being voted.

All proposals will have a minimum voting period of 7 days, once the period closes no vote can be counted, and within 24 hours the result of the vote will be published indicating each position in percentage of voting intention and the total BNB collected.

PROJECT WALLETS

The wallets assigned by the project for various utilities will be reflected here with their wallet address and description.

It should be noted that some investments made by the trading department in centralized and decentralized stock exchange may not be visible for reasons beyond the control of the trading team, the balance shown in the treasury in charge of these operations will be an underestimate of the trend of the project's treasury, also every month will be published in the official Discord all the movements of purchase and sale of investments indicating the percentage of profit for each group of investors according to their level of commitment, this is measured by the level of stake and in order to ensure full transparency to investors of Black Shark Finance.

Description	Token Quantity	Wallet address

```

Treasury venture capital fund management team

The venture capital fund management team of the project, will analyze the different investment options by the company that will provide the service with its own algorithm linked to a financial investment AI to indicate various investment options indicating the range of entry, stop loss and stop profit recommended.

The AI algorithm provided by the company that will offer its services to Black Shark Finance has a very attractive and demonstrable success rate of 70% accuracy in each recommended investment.

When the contract with this company is formalized, the beginning of its services with Black Shark Finance will be published in the official channels.

Among the weekly reports provided by the algorithm and the Black Shark Finance operations team, the corresponding analysis will be performed to determine the best option to make external investments, assessing the different criteria according to the risk level of the asset.

To avoid manipulation of BSF's position entries in the different assets, these investments will only be announced once the profit is collected and will be published in BSF's official networks and channels.

INVESTMENT STRATEGIES

Liquid Token Investment

Black Shark Finance will invest in liquid tokens of undervalued projects that have great potential for long-term success, when the investment operations team verifies a project that is a great opportunity this will be taken to voting to the investment community for them to analyze and decide if Black Shark Finance should invest in that asset or not.

Also in this investment strategy will enter the investment in Yieldfarming, using the investment capital in other DEFI to get the maximum return on that capital and once the goal of collecting profits is achieved, the proportional part of the capital used will be returned from the treasury and the profit will go to a wallet called Dividends, where each month the distribution of profits is made with investors who have their BSF in locked stake, the percentage of total profits is about 5% up to 25% this will depend on what level of commitment you have with the project.

Investment in centralized and decentralized assets

Another of the qualities of the project is to allocate a percentage of the treasury to centralized investments such as Forex, or in indexed shares on an annual basis.

In decentralized investments outside the crypto market, emphasis will be placed on products such as "futures", performing operations of different levels of risk and temporality.

All investments will be backed by the company that will provide the financial product positioning service with an algorithm linked to a financial investment AI.

EXTERNAL DEVELOPMENT TEAM

Black Shark Finance will work with a blockchain development team that will lead all the cryptographic Project.

A percentage of the Development wallet will be used to pay for this service and to ensure that expectations are met. Any external service to the Black Shark Finance team will be under a protected contract to guarantee maximum professionalism and legal security.

Before choosing a member of the development team, an intensive round of contacts and research will be carried out for each of the chosen ones.

Once the development team has been created, investors will be notified, attaching a professional data sheet and financial merits, to ensure full transparency of each of the steps to be taken for the improvement of the project.

COMPANIES THAT PROVIDE THEIR SERVICES

Black Shark Finance will work with various companies from different sectors from the crypto world, finance, brokers, exchange, KYC, security certificates, and much more...

To achieve the various objectives set out in the roadmap and in the white paper.

It should be noted that the contract of these companies will begin when the project reaches an optimal level of capital to contract external services without negatively affecting the price of the token.

Each contract that is made will be published in the official sources of the project to maintain the level of transparency that the investors of the project deserve.

WORKANA

Freelance hiring platform for all sectors, with guarantees of service compliance.

FIVERR

fiverr

The largest freelance recruitment platform in the world, with service compliance guarantees and a wide range of freelancers from all sectors.

DEGIRO

Broker platform of the centralized market that offers all types of assets at very low commissions with multiple prizes for their quality.

STOCKFINK

Platform that automatically downloads the day's data and generates predictions so that we can make investments before the market opens each day.

QUANTFURY

Application that allows you to trade in 5 different markets. FixedFloat allows you to exchange your cryptocurrencies quickly and safely.

POOCOIN

Search engine for cryptocurrency tokens on the Binance Smart Chain (BSC) network that allows you to know their price in real time.

GENOSIS SAFE

This platform has a decentralized application to create multisig wallets on the Binance Smart Chain (BSC) network.

PANCAKESWAP

Decentralized exchange platform that allows the exchange of existing tokens within the Binance Smart Chain (BSC).

COINBRAIN

The next generation analytics platform for crypto traders that combines traditional and alternative data to help you identify the hidden gems in the market.

BOGGED FINANCE

Decentralized finance platform (DeFi) built on the Binance Smart Chain (BSC) that allows research and orders of any token that is part of said smart block chain.

BINANCE SMART CHAIN

Binance Smart Chain or BSC is a blockchain network of the Chinese trading platform Binance. The network allows the execution of applications based on intelligent contracts (Smart Contracts).

NUBII

Nubii es una oficina virtual, pero también un espacio para eventos. La ventaja que da es que tienes una visión general de los asistentes, puedes contactar con ellos y ver las conferencias de forma sencilla.

DXLOCK

It is a decentralized cross-chain, token and liquidity blocking system that is interoperable with other Dx applications. Its objective is to provide a connected user experience and to provide security guarantees in its DxSale DAO services.

BLACK SHARK FINANCE

BITMEDIA

Main company focused on advertising in the crypto market through banner auctions on the main cryptocurrency websites.

BSCSCAN

It is a block explorer and analytical tool that can search all transactions on Binance Smart Chain.

A-ADS

Marketing platform focused on banner auctions in more than 5,000 ad units of different categories.

BROADCAST PLATFORMS

Black Shark Finance also has a presence on multiple web pages or project valuation platforms through votes to access a ranking, blockchain programming blogs and soon in columns of digital newspapers specialized in Blockchain technology and the world of cryptocurrencies.

ABSTRACT

Black Shark Finance is a project dedicated to the creation of a decentralized risk investment fund, where investors who stake at different levels of blocking will benefit from external investment operations, both in the centralized and decentralized world at different levels of risk.

A percentage of the profit generated in the external investment operations of the project will go to the investors giving them a profit ratio from 5% to 25% depending on their level of commitment to the project.

The project will also have several backers outside its own currency to increase the level of success, for this purpose a percentage of the treasury will be allocated on a monthly basis to different backing assets such as BTC, shares and other crypto-assets backers.

Investors will be able to participate in the direction of the project by means of different expositions on the project's movements where they will have to vote with a minimum duration of 7 days.

Every year the Black Shark Finance development team meets to decide the new roadmap for the coming year, this annual roadmap will be put to a vote for investors to study and decide their vote.

ROADMAP

Future plans and project development objectives.

2022

Q2

-  Creation of a logotype.
 -  Election of corporative colors.
 -  Election of the geometric shape.
 -  Creation of the brand "Black Shark Finance".
-  Launching in social network.
 -  Facebook.
 -  Instagram.
 -  Twitter.
 -  Reddit.
 -  Medium.
-  Launching of diverse communication channels.
 -  Telegram.
 -  Discord.
